SALES DEPARTMENT

TENNIS ELBOW

Forearm Support, Elbow Relief, Comfortable Movement

Tennis elbow support is designed to help manage discomfort around the elbow caused by repeated hand, wrist, or forearm activity. By applying controlled pressure to the upper forearm area, it helps reduce tension on the muscles and tendons connected to the elbow. This support can be useful during work, exercise, sports activities, or daily movements that involve gripping, lifting, or repeated use of the arm.

Its lightweight and adjustable structure provides a secure and comfortable fit for different arm sizes. The design helps keep the support in place while allowing natural arm movement without unnecessary restriction. It is suitable for people who experience forearm fatigue, mild strain, or pressure from repetitive motions, helping improve comfort, stability, and support throughout the day.

KEY BENEFITS

- Helps reduce elbow pressure
- Supports forearm stability
- Assists controlled movement
- Improves daily comfort
- Comfortable for daily wear

تنیس البو

این تنیس البو برای ایجاد فشار کنترل شده و کاهش فشار وارد بر عضلات و تاندون‌های ناحیه ساعد و آرنج طراحی شده است. این محصول با اعمال فشار مناسب بر قسمت فوقانی ساعد، به کاهش کشش و فشار ناشی از حرکات تکراری، فعالیت‌های ورزشی و کارهای روزمره کمک می‌کند و در عین حال راحتی مناسبی را هنگام حرکت فراهم می‌سازد. طراحی سبک، قابل تنظیم و ارگونومیک آن باعث قرارگیری مناسب روی دست شده و بدون محدود کردن حرکت طبیعی، از عضلات و تاندون‌های ناحیه آرنج حمایت می‌کند. این محصول برای خستگی عضلات ساعد، فشار ناشی از فعالیت روزانه، حرکات تکراری و حمایت عمومی از ناحیه آرنج مناسب است.

مزایای اصلی

- کمک به کاهش فشار ناحیه آرنج
- حمایت از عضلات و تاندون‌های ساعد
- بهبود کنترل حرکت دست و ساعد
- حمایت عضلات در هنگام فعالیت های ورزشی
